Beginners Training Guide

THE BLOODY LONG WALK
A 35km Challenge to Cure Mito

YOU AND 35KM Twelve Training Tips to Success

1 Build Slowly

Use a slow-but-steady approach to build up your weekly total distance but also ensure you build in adequate recovery. Allow yourself time to get stronger and fitter without injuring yourself or burning out. Form a plan and stick to it. You know the final distance is 35km.

Don't try and do it all in your first day.

Be sure to track your progress, either with a simple written dairy or use an activity tracker like a Fitbit.

The chart shows total distances for each week.

Stage	End of Week	Total Distance for Week
Foundation	1	9 km
	2	12 km
	3	15 km
Build	4	18 km
	5	21 km
	6	24 km
	7	28 km
Taper	8	24 km
	9	9 km
Event	10	**'The Bloody Long Walk'**

2 Choose Your Shoes

Ensure you have comfortable good quality exercise shoes which are not too old or worn. If you are not sure go to a sports store or sports speciality shop and ask to be measured and fitted properly.

Match your shoe with a comfortable pair of sports specific socks. Don't forget you need more than just comfy shoes and socks. Now is the time to work out what top, shorts, hat etc work best for you! Consider the weather and choose accordingly.

3 The Go Long Day

Rather than walking long or the same distances everyday, choose one day each week to go for your 'long walk'. Have a recovery day the day after yout 'Go Long' training day.

This is a great time to test and fine-tune your walking gear and work out what you need to carry in your backpack. On your 15km week you may choose to do 5km on one day and just 2km a day for 4 other days.

4 Drink On The Go

Make sure your setup includes an easy way to carry water and food. Many experienced walkers use hydration packs with a built in bladder and drinking tube. If you are not sure checkout your local camping/sports store for options. Look for one with storage space for food and equipment.

It is important to not only be prepared to drink on the go but also to ensure you are properly hydrated in the weeks leading up to the event and during your training. The average person should aim for 3 – 4 litres of water a day.

5 Pay Attention To Your Body

If you have pain that persists or gets worse, it's time to seek the help of a professional personal trainer or physiotherapist. Make sure you build in at least one day of rest into your weekly schedule. Your success is only as good as your recovery. This is your recovery day.

If you are sick or unwell, rest is best. Remember, listen to your body, sometimes you need to push, but other times you may need to slow down and take it easy.

6 Cross Train

Walking is the best exercise for your training, however a cross training session each week can strengthen your body. Try bodyweight exercises, resistance (weight) training and core training as well as yoga or pilates.

7 Get Social

Training with a friend is more fun, safer and delivers more results. Connect with friends of colleagues and schedule time together to get out and train. Creating a support network can keep you motivated at times when your energy wanes. energy wanes.

8 Know Your Way

Check out the interactive map (the 'Route' page of www.bloodylongwalk.com.au has maps so you know where you are going.

The course includes paved, unpaved, cross country , stairs and uncontrolled road crossings. Be sure you are comfortable with whatever comes your way. Incorporate similar terrain in your training.

9 Feed Your Body

Eat clean nutritious foods to ensure optimal results. On your Go Long training day trial food items such as energy gels/bars to see how they work for your body. Energy gels are usually available at your local outdoor hiking or cycling store.

10 Stretch Baby, Stretch

Prior to beginning your daily workout session stretching assists your body to warm up and prepare for exercise. Finish your session with full body static stretches. This will assist with recovery as well as lower your risk of injury.

11 Mix it Up

Don't be shy at mixing it up. Try some interval work - walk for 30 seconds, walk faster/jog for 30 seconds and as you become fitter begin combining a faster pace for longer with a shorter recovery. Hill climbs can also be a great addition. Look for a variety of training terrain (grass, sand, unsurfaced trails, paved path, hills and stairs) to increasingly challenge yourself as the weeks progress. Don't forget to carry your fully loaded hydration and equipment pack. It is important that your body becomes accustomed to carrying its weight.

12 Have Fun And Stick To The Plan

This is an exciting journey you are about to embark on. Enjoy each training session, celebrate your successes, allow yourself time to adapt, learn and grow. Your fitness and strength will gradually increase and improve even though there will be setbacks. In those moments keep focussed on your goals, stick to your plan and keep moving forward, The Bloody Long Walk will be a memorable and well-earned achievement.

Happy training!
